Cybersecurity and Analytics for All Your Connected Devices

nozominetworks.com

IT & OT Security

Provide a solution that addresses the needs of both IT and OT groups that is easy to deploy and manage

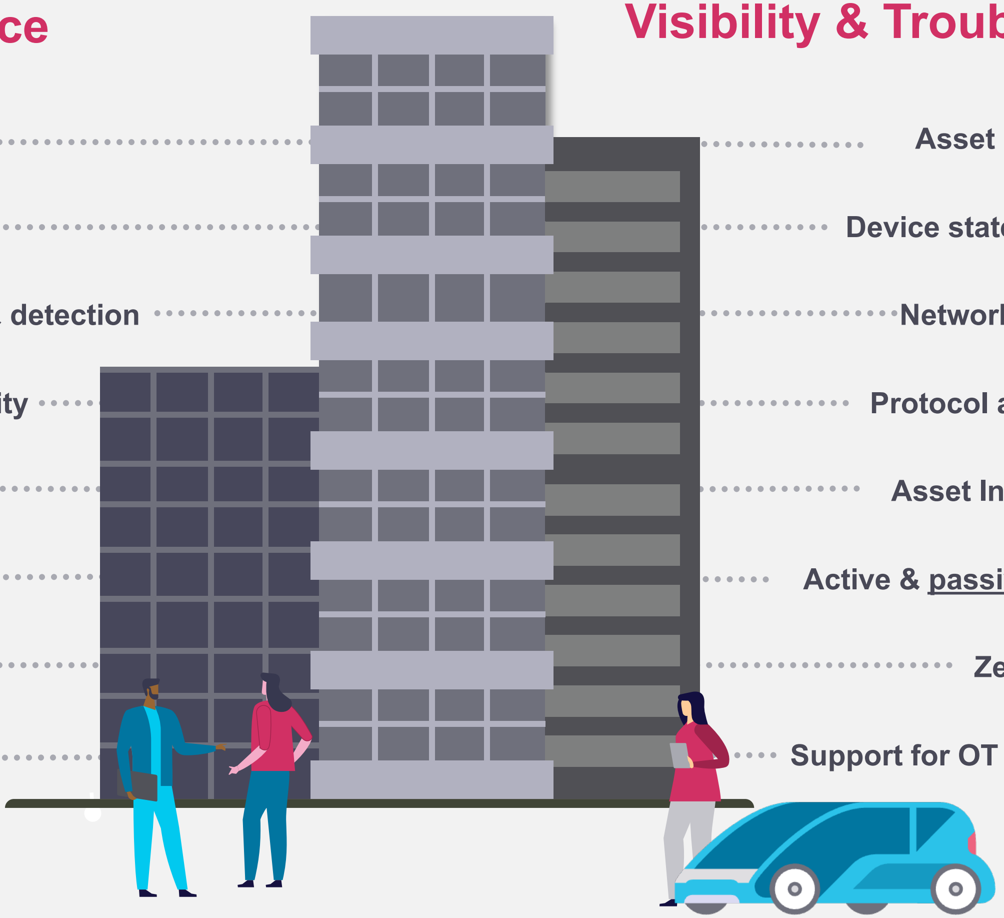
IT

Need comprehensive visibility of all IoT and OT assets and networks, including their risk exposure

Need clear identification and prioritization of the threats and risks that threaten security the most

Need consolidated information from siloed networks and sites via one monitoring tool

Need to reduce security risk in a constantly changing threat landscape that includes targeted attacks



Risk & Compliance

- Asset discovery
- Vulnerabilities
- Threat intelligence & detection
- Architectural flexibility
- Low noise
- Active polling
- SOC use-cases
- Integration options

Visibility & Troubleshooting

- Asset discovery
- Device state & health
- Network profiling
- Protocol anomalies
- Asset Intelligence
- Active & passive polling
- Zero impact
- Support for OT protocols

OT

Need advance warning of failing equipment or network stability issues in order to act before problems impact occupants

Need faster and more resource-efficient troubleshooting of IoT/OT incidents with insightful forensic tools

Need to keep track of diverse building automation systems and many maintenance contractors

Need remote monitoring of IoT/OT systems across distributed building locations

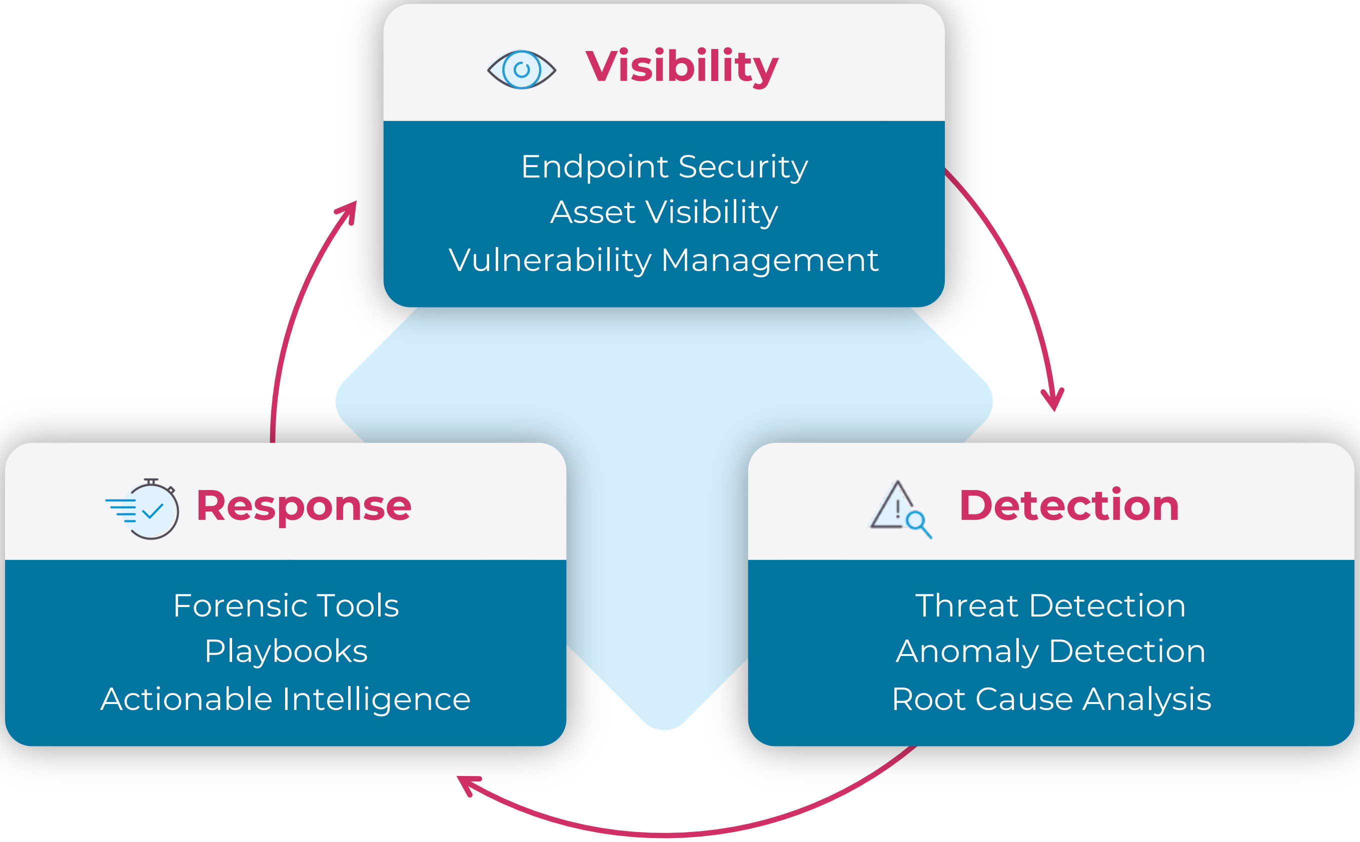
What Does Nozomi Do?

Cyber Security for Industrial Networks with Exceptional Operational Efficiency



Visibility

Endpoint Security
Asset Visibility
Vulnerability Management

Detection

Threat Detection
Anomaly Detection
Root Cause Analysis

Response

Forensic Tools
Playbooks
Actionable Intelligence

ETHOS: Emerging THreat Open Sharing

An Open Platform for Anonymous Threat Sharing

Designed to be used by **ANY security vendor**

Intended to align with the US Govt **Shield's Up** and the **100 Day sprint**

A benefit to **critical infrastructure providers** & **Governments**

Leverages crowdsourced information in a **community platform**

Designed to reduce timelines for **identifying novel threats targeting OT systems**
